

## Installation instruction Cancellation module K25 ESA front.

- We prefer to set the ESA mode in Comfort and One Rider before starting this job. If this is not possible, you may need to turn ignition on/off twice after installation.
- Turn your ignition key off.
- Remove the fuel tank, following the instructions in your BMW Manual.
- Unplug the electronic front preload adjuster. Do not break the plastic connector. For assistance in disconnecting the plastic connector, click on the link below to see our Youtube video:  
[How To Disconnect a BMW Motorcycle ESA Shock Wiring Connector](#)
- Plug the cancellation kit into the this plug.
- Turn ignition key on.
- A fault mode appears.
- Turn ignition key off.
- Turn ignition key on.
- Kit is recognized and ready to run.
- Turn ignition key off.
- Install the module as shown in the picture below.
- Take a plausible route for the cable and tie it with the enclosed Tie-Wraps.
- Install the fuel tank, following the instructions in your BMW Manual.
